SUPPLEMENT TO
REPORT NO.

- Attachment One is a chart showing the position of the Oberspreewerk within the framework of the SAGs and the organization of the experimental department of the Oberspreewerk. Attachment Two is a list of the Russian officials of the Oberspreewerk.
- The production for 1949 is expected to amount to about 1,200,000 marks (east); straight reparations are calculated at 300,000 marks (east) for 1949. The remainder is to be used for export, for the SAGs, and for German industry.
- During the middle of January 1949 a discussion was held at SMA headquarters in Karlshorst, at which the following organizations were represented:

SMA
Yugoslavian Electrical Industries
Yugoslavian Military Mission
Yugoslavian Trade Mission
German Economic Commission
Soviet AG "Izolyator"
Soviet AG "Kabel"
Soviet AG "Pribor"
Russian Management of the Oberspreewerk

Director Gruner was also present. The conference dealt with the possibility of drawing up a trade agreement whereby the Yugoslavian electrical industries could import electrical equipment of all types, to advance the electrification of Yugoslavia. The Yugoslavs were prepared to negotiate for the entire electrical production not already allocated for reparations.

- The experimental section of the Oberspreewerk has developed a television set; an improved Mechau projector was used and a good picture was obtained on a screen 1.5 meters by 2.0 meters.

Experiments are being carried out under SMA orders in a large laboratory in Köpenick, in the field of supersonic waves, on the basis of German war-time research. It is alleged that sound waves have been developed which would kill human beings at a distance of about 100 meters, and paralyze them at a distance of 200 meters.
